SmartBridge **Problem-Solution Fit** SKILL WALLET

Date	27 June 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Problem-Solution Fit Canvas

The canvas below checks that the proposed solution accurately addresses the root causes, behaviors, and limitations of the target audience.

1. CUSTOMER SEGMENT(S) [CS] • Government policy analysts / planning ministries • NGO program managers & development researchers • Students / academics studying development economics	**6. CUSTOMER LIMITATIONS (budget, devices) [CL]** • Limited statistical/data-science expertise on staff • Constrained budget for dedicated data-science tooling • Need a tool that works with publicly available indicator data only	**5. AVAILABLE SOLUTIONS — PROS & CONS [AS]** • UNDP published HDI reports: + authoritative - historical only, slow to update • Manual spreadsheet scoring: + flexible - slow, error-prone, inconsistent • Generic BI dashboards: + visual - display data only, don't classify/predict
2. PROBLEMS / PAINS + FREQUENCY [PR] • Computing the HDI category by hand from several indicators is slow (every reporting cycle) • Hard to quickly compare/classify many regions at once (recurring reviews) • Published HDI figures lag behind the latest indicator data (annual lag)	**9. PROBLEM ROOT CAUSE [RC]** • HDI is computed from several weighted indicators (GDP, life expectancy, education) using a formula that's hard to apply consistently by hand • No accessible tool lets non-technical users get an instant classification from raw indicator values	**7. BEHAVIOR + ITS INTENSITY [BE]** • Analysts repeatedly cross-check indicator values against HDI tables (frequent, moderate effort) • Researchers manually bucket regions into development tiers for comparison (frequent, high effort)
3. TRIGGERS TO ACT [TR] • New indicator data is released (World Bank, UNDP, national statistics) • A policy or funding decision needs an up-to-date classification • A research project needs quick classification across many regions **4. EMOTIONS BEFORE / AFTER [EM]** • Before: frustrated by slow manual analysis; unsure results are consistent • After: confident in a fast, repeatable classification; free to focus on decisions instead of computation	**10. YOUR SOLUTION [SL]** • A machine learning web app that takes a region's socio-economic indicators (GDP, literacy, life expectancy, etc.) and instantly predicts its Human Development category — Low, Medium, High, or Very High — with no manual calculation needed.	**8. CHANNELS OF BEHAVIOR [CH] ONLINE** • Web prediction app (Flask) • Shared dashboards / reports **OFFLINE** • Government planning meetings • Printed policy briefs
