

Project Executable Files

Date	15 March 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	NA
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

```
HDI_prediction/
|
+-- static/
|   +-- css/
|   +-- images/
|   +-- js/
|
+-- templates/
|   +-- home.html
|   +-- indexnew.html
|   +-- resultnew.html
|
+-- app.py           # Flask application
+-- model.py         # Model training script
+-- model.pkl        # Trained ML model
+-- HDI.csv          # Dataset
+-- requirements.txt # Python dependencies
+-- runtime.txt      # Python version
+-- README.md        # Project documentation
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://hdi-prediction.onrender.com
Platform / Hosting Provider	Render
Backend	Flask (Python)
Frontend	HTML, CSS, Bootstrap
Machine Learning	Scikit-learn
Database	CSV Dataset (HDI.csv)
Repository Link	https://github.com/saicharan3935/HDI_prediction.git
Demo Video Link	

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

```
Pre-requisites:  
Python 3.11.9  
pip  
Git  
VS Code (Recommended)  
  
Step 1: Clone the repository  
git clone https://github.com/saicharan3935/HDI_prediction.git  
  
Step 2: Move into the project folder  
cd HDI_prediction  
  
Step 3: Install all dependencies  
pip install -r requirements.txt  
  
Step 4: Run the model (optional, if model.pkl needs to be regenerated)  
python model.py  
  
Step 5: Start the Flask application  
python app.py  
  
Step 6: Open the browser and visit  
http://127.0.0.1:5000/
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the dataset	Use updated HDI datasets for better accuracy
2	Only one prediction is processed at a time	Can be enhanced for batch prediction in future
3	Uses CSV dataset instead of a database	Can be upgraded to MySQL or MongoDB
4	Internet connection is required for deployed version	Local version works without internet
5	Supports only HDI-related prediction	Can be extended with additional indicators
