Maximum Marks	4marks

Empathy Map

The empathy map looks at the project's target user from four angles — what they Say, Think, Do and Feel — in relation to the problem the project addresses. This helps the team design a solution centered on that user.

SAYS • “I need to know quickly whether a region is low or high in human development.” • “I don’t have time to manually compute an index from raw indicator data.” • “I want a tool that explains why a region got a particular classification.”	PERSONA Policy Analyst / Researcher (Role / User Type)	THINKS • Is there a faster way to classify regions without doing the statistics myself? • I hope the model's predictions are accurate and based on trustworthy indicators. • Could this help me decide where aid or policy attention is most needed?
		FEELS • Frustrated by slow, manual data analysis. • Anxious about basing recommendations on incomplete or outdated data. • Relieved and confident when a quick, reliable tool gives a clear answer.
DOES • Collects socio-economic data (GDP, literacy, life expectancy) from public reports. • Manually compares indicator values against known HDI thresholds. • Cross-checks model predictions against official government/UN reports.
